Interdisciplinary Master’s degree program in Business and Psychology
www.ku.de/businessandpsychology
In view of growing leadership complexity, it is of increasing importance for managers and executives to also have psychological know-how in addition to economic knowledge. The field of psychology helps to better understand human behavior in an organizational context while business and economics ensure that corresponding economic know-how is covered.

In the degree program “Business and Psychology”, an interdisciplinary team representing the different sub-disciplines business, economics and psychology brings the two worlds of business and psychology together to train leaders of the future.

### Degree program can be studied entirely in English

Courses in the degree program are taught in English or German. Required courses are exclusively offered in English. This ensures that the program is also available to international applicants with German language proficiency from level A2 GER. In any case, all students benefit from the international orientation of students and lecturers. This also facilitates integration of a semester abroad into the flexible course of study. At the same time, working in international groups will ideally prepare students for workforce diversity in their future professional careers.

**Career prospects**

Leadership positions as:
- Executives
- HR managers
- Marketing managers
- Product managers
- Consultants

**Master’s thesis**
