

Behavioral Finance

Behavioral finance uses insights from psychology to understand how human behavior influences the decisions of individual and professional investors, markets, and managers. The purpose of this lecture is to present what we have learned about financial decision-making from behavioral finance research.

On the basis of the Corona regulations, we are offering a portfolio exam as an alternative examination type instead of a written exam for the summer term 2020. Please register for the portfolio during the first examination period. The portfolio will be offered only once and there will be no written exam! Portfolio dates: Instructions to be distributed on July 27 2020, deadline for submission on August 10 2020 at 11:00 am. Further information regarding the content of the portfolio and further organisational details to be found on ILIAS.
