Physical Geography/Landscape Ecology and Sustainable Ecosystem Development

Within the Geography degree program at the Catholic University of Eichstätt-Ingolstadt (Germany), the Professorship of Physical Geography/Landscape Ecology and Sustainable Ecosystem Development is concerned with aspects and interactions between biotic and abiotic factors which characterize our environment. The interplay of atmosphere, biosphere, and anthroposphere as well as the sustainable development of ecosystems are of particular importance in this context.

Our research focus: Aerobiology | Phenology | Ash dieback | Urban climate | Forest ecosystems | Dendrochronology
